Clamping System: increase output with 100m/sec.

The wedge is fixed at place with a unique new clamping system allowing the knife to withstand even high centrifugal forces at 100 m/sec. This allows for a 35% higher output at the same time.

Radial Access: save time in changing the knife.

Accessibility to the knives has never been this easy. No need to dismount the tool, the new clamping system has radial access to the knife clamping screw so that any knife can be accessed and changed directly without dismounting the tool.

ISOprofil: save time in diameter adjustment.

freud provides a unique system that ensures automatic recovery of the original cutting diameter after tool exchange. ISOprofil ensures an always perfect profile without the need of measuring devices therefore significantly saving time during the tool change.
